Requests to Move down in Math. BC 4's & 5's and L's are sometimes experiencing difficulty in their math classes and search out advice from Math Advisers on whether they should drop down a level. Current policy is that students may drop down one level but may not drop down two levels. For example, an L who is in 1131 may drop down to 1150 (but not 1130 or 1148 since those courses are at the N level). Questions to ask them include the following:

- a. What math class did you take your senior year? Math or Stats
- b. How much time are you spending on your homework? Couple hours a day?
- c. Have you visited your Prof/TA during office hours?
- d. Gone to the tutoring room? Participated in a study group?
- e. Consider doing the book math problems first then the harder online math problems.
- f. Consider attending a lecture of the class that you want to move up to or down to before requesting the switch just to make sure it is a good fit.
- g. Note: Pre-Med, Pre Engineering, Pre Business students sometimes like to be in a less challenging math class to start with for GPA purposes to get into the program.
